

CrisTrial BioVault

BIOTOOLSPLATFORM

*A free, open-access biotech platform with a CRISPR Gene Visualizer
and a real-time Clinical Trial Finder — built for students, patients & researchers.*

■ What is This Project?

- A **free biotech website** with 2 powerful tools built inside it.
- **Tool 1 — CRISPR Visualizer:** Paste any DNA sequence — it shows you exactly where CRISPR scissors can cut that DNA.
- **Tool 2 — Clinical Trial Finder:** Type any disease — it shows all real ongoing medical trials happening worldwide right now.
- Built using **real live data** from the US Government's official clinical trials database.
- **No app to download, no login, no cost** — just open and use.

■ Why We Built This?

- Biotech has **insane amounts of data** but almost no easy tools for students to explore it.
- Clinical trial data exists but it's **buried in complicated government websites** — we made it simple.
- CRISPR is the **biggest revolution in biology** right now but students have no visual tool to understand it.
- Everything out there is either too complex for beginners or costs money.
- We built **one free platform that solves all of this.**

■ Benefits

For Students	For Patients & Families	For Researchers & Doctors
– Understand CRISPR visually instead of reading textbook theory. – Explore real biotech research happening right now. – Learn how guide RNAs work by playing with real DNA sequences. – Great for exams, projects, and viva.	– Find real clinical trials for diseases like cancer or diabetes. – See which trials are actively recruiting right now. – Know phase, location, eligibility — all in one place. – No need to navigate complicated government websites.	– Quickly check what trials are running for any condition. – Find trials by country, phase, and status instantly. – Save hours of searching through ClinicalTrials.gov manually.

■ Real World Impact

- Clinical trials save lives — **but most patients don't even know they exist.**
- This tool makes that information **accessible to everyone.**
- CRISPR is being used to cure genetic diseases like **sickle cell anemia, blindness, and cancer** — our tool helps people understand how.
- Completely **open and free** — anyone in the world can use it.

■ Why This is Impressive

- Uses **real government API data** — not fake or dummy data.
- Implements an actual **bioinformatics algorithm** (PAM site detection).
- Covers two of the **hottest topics in biotech** right now — gene editing and clinical research.
- Built by a **2nd year BTech Biotech student** — which makes it even more impressive.
- Has a **live link** you can share anywhere — resume, LinkedIn, college presentations.

■ Quick Facts

DETAIL	INFO
Tools inside	2 (CRISPR Visualizer + Clinical Trial Finder)
Cost to build	Rs. 0 — completely free
Cost to use	Rs. 0 forever
Data source	US Government — ClinicalTrials.gov
Trials in database	500,000+ real active trials
Who can use it	Anyone, anywhere in the world
Built by	2nd year BTech Biotechnology student

"We built a free website where anyone can find real medical trials for any disease worldwide, and visually understand how CRISPR gene editing works — completely free, no login needed."
